

GX-1F SOIL SENSOR INSTALLAION MANUAL

Effective August 18, 2023

Before starting the installation:

1) Download the GroundWorx Mobile App

- For iPhones, download at <u>https://apps.apple.com/us/app/groundworx/id1528583100</u>
- For Android Smartphones, download at <u>https://play.google.com/store/apps/details?id=com.mygroundworx.app</u>
- Or search for "GroundWorx" in the App Store (Figure 1)

- Check your email for login credentials. The "*GroundWorx Login Credentials*" email will include your username and temporary password for logging into the mobile app.
- You will also receive a "*New Facility available*" email granting permission to your facility (company, course, farm, sports complex, campus, etc.).
- GroundWorx recommends downloading and logging into the mobile app (from your home, office, etc.) prior to starting the onsite Sensor installation.

3) Acquire tools for digging the hole:

- GroundWorx recommends using the following tools:
 - If the being placed in a turf area, a 7" Hexagon Turf Plugger
 - 6" Earth Auger. GroundWorx recommends the "Seymour General Purpose Post Hole Auger,
 6-Inch Spread, High Carbon Steel Blade" which can be purchased at <u>Plumbersstock.com</u>
 - Shovel and/or Post Hole Digger

4) Build a plan to complete the entire installation in one day:

Once proficient in this process, average installation per Sensor will be approximately 15-20 minutes!

Summary of Installation Steps:

Step	Title of Step	High-Level Summary
1	Location & Activation	Stand at the installation location. Remove the sticker with magnet to activate.
2	Verify Cellular Connection	Using the Mobile App, verify that the Sensor has a cellular connection.
3	Provisioning	Provision the Sensor following the detailed steps in the Mobile App.
4	Dig the Hole	Using the recommended tools to dig a smooth cylindrical hole.
5	Position the Sensor probe set	Place the Sensor in the hole and press probes into the sidewall. Backfill.
6	Complete the Installation	Using the Mobile App, confirm that the Sensor is reporting measurements

Figure 1

Follow the detailed installation steps below and repeat at each Sensor location !

1) Location & Activation

- a. While onsite at your facility, stand at the exact location where you will be installing the Sensor.
- b. Take note of the Serial Number (S/N), which is the name of the Sensor (i.e., G1A00000787). You will need the S/N for future steps in this installation process (Figure 2).
- c. Locate the power sticker on the side of the Sensor (Figure 2). The sticker is attached to a magnet.
- d. Remove the sticker, which will separate the magnet from the Sensor. When you remove the magnet, the Sensor powers on. Place the sticker and magnet in a pocket or away from the Sensor.
- e. You will now see a small green LED light that will blink every 2-3 seconds (Figure 2).
- f. Ensure that the magnet is not within close proximity of the Sensor. GroundWorx recommends that you save the magnet for possible use in the future.
- g. Hold the Sensor upwards with the top pointing towards the sky for **20 seconds** (Figure 3)
- h. After **20 seconds**, place the Sensor on the ground by setting it on its side. Ensure that it is in close proximity to where the hole will be dug (Figure 4).

Figure 2

Figure 4

2) Verify Cellular Connection

- a. Open the GroundWorx mobile app.
- b. If you are not logged in, enter your username and password to login.
- c. Ensure you have the "Current Facility" selected. Your Current Facility is in the upper right-hand corner of the mobile app home screen. (Figure 5)
 - i. To select a different Facility, tap the Hamburger icon to display options screen. (Figure 5)
 - ii. Tap the down arrow key next to the current Facility name. (Figure 6)
 - iii. Select the correct facility and then tap the "x" to cancel out of the options screen. (Figure 6)
 - iv. The correct Facility is now displayed in the right-hand corner of the home screen (Figure 5)
- d. Tap the "Sensors" icon on the bottom of the screen. (Figure 5)
- e. Find the Sensor Name from the list (review step 1b on the Sensor's name, i.e., G1A00000787).
- f. If the Sensor status is "Inventory" (Figure 7), wait for approximately **1 minute** and refresh the screen by swiping down. The Sensor status will update to "Ready" (Figure 8). If the Sensor does NOT update to "Ready," stop the installation. Skip to the **Troubleshooting** section of this Install Manual.
- g. When the Sensor status is "Ready" (Figure 8), verify the signal strength as follows:
 - i. If the signal strength is between -65 and -98 dBm (Figure 9), proceed to Provisioning.
 - ii. If the Sensor signal strength is above-99 dBm (Figure 9), skip to the **Troubleshooting** section of this Installation Manual.

3) Provisioning

- a. Open the GroundWorx mobile app.
- b. Tap the "Sensors" icon on the bottom of the screen. (Figure 5)
- c. Find the Sensor Name from the list.
- d. Select the Sensor that you are installing (Figure 10) by tapping on the right arrow.
- e. The mobile app will then walk you through the remaining installation process which is consistent with the rest of the steps in this Installation Manual.
- f. On the 1st Provisioning screen, select "Begin" (Figure 11)
- g. On the next Provisioning screen, collect information on the Sensor using the drop-down lists. Items marked with "*" are required fields (Figure 12). When complete, tap the Next button.
- h. On the next Provisioning screen, select the GX-1F model and tap the Next button. (Figure 13)
- i. Secure your smartphone for now and proceed to Dig the Hole.

4) Dig the Hole

- a. Remove the Turf (if necessary) with the 7-inch Hexagon Turf Plugger. (Figure 4)
- b. Dig a smooth cylindrical hole.
- c. If this is a tree installation, Dig the hole up to 35 inches deep with the 6" Earth Auger. (Figure 4).
 - i. The G-1F sensor body is 11 inches long and the GX-1F tether line is 24 inches. Therefore, the maximum depth is 35 inches (11" + 24")
- d. Proceed to the next step, Place Sensor Probes into the Sidewall.

5) Position the Sensor probe set

- a. Remove the prong guard. GroundWorx recommends that you save the prong guard for potential future use.
- b. Place the sensor probs into the hole based on your desired depth.
- c. Push the prongs into the side wall of the hole.

GroundWorx recommendation: If this is a tree deployment, insert the sensor with probes facing the root ball of the tree at the root ball/soil interface.

- d. Backfill and compact as you go.
- e. The main body of the GX-1F will be placed into the top of the hole and function as a plug.
- f. Open the GroundWorx mobile app.
- g. Using the slider bar, set the depth (Figure 14)
- h. Tap the Next button to finish the remaining mobile app provisioning screens.

Figure 14

6) Complete the Installation

- a. To Complete the installation, tab Complete Installation on the bottom of the final provisioning screen. (Figure 15)
- b. From the Home screen, select the Sensors icon. (Figure 5)
- c. Select the Sensor that you just installed (Figure 10) by tapping on the right arrow.
- d. Tap the Data Icon in the upper right-hand corner. (Figure 16)
 - i. You should see Sensor reading for Temperature, Salinity, Dielectric, and Moisture. The Sensor started reporting measures as soon as you positioned the Sensor in the ground.
 - ii. If readings are not taking place after 10 minutes, skip to the **Troubleshooting** section of this Installation Manual.

Installation Troubleshooting

Verify Cellular Connection: Remedies

- 1) If the Sensor does not appear on the "Ready" screen after 1 minute, stop the installation.
 - a. Place the magnet back on the Sensor.
 - b. Open the GroundWorx mobile app.
 - c. Select the Sensor.
 - d. Select "Abort" button to reset the Sensor back to "Inventory." (Figure 17)
 - e. Enter your GroundWorx Password to confirm "Abort. (Figure 18)
 - f. Move the Sensor to a different location.
 - g. Follow same process starting with the Location & Activation step.

- 2) If the Sensor signal strength is above-99 dBm (Figure 9),
 - a. Place the magnet back on the Sensor.
 - b. Open the GroundWorx mobile app.
 - c. Select the Sensor. Select "Abort" button to reset the Sensor back to "Inventory." (Figure 17)
 - d. Input your Password to confirm "Abort. (Figure 18)
 - e. Move the Sensor to a different location.
 - f. Follow same process starting with Location & Activation

Complete the Installation: Remedies

1) If readings are not taking place, please contact your GroundWorx representative for support.

If you require additional installation assistance:

- Contact your GroundWorx representative.
- Email GroundWorx at support@mygroundworx.com
